COVID-19: Mental Health Guidance

April 30th, 2020

As the COVID-19 crisis has continued, CGA members have identified a number of discussion points around both the physical and mental health of workers in our industry. This guidance document will specifically consider the mental health aspect.

While some personnel in the industry have found they very much prefer and are more productive working remotely, others have had struggles with the inability to interact face-to-face with their everyday colleagues, isolation from co-workers/other people/society, increased workloads during this time and other the responsibilities they must bear while working from their homes, such as child care needs while schools are closed, etc.

This document will not attempt to fully address all of the issues or potential solutions in isolation from other guidance or advice, but rather, will endeavor to capture the leading practices available from CGA membership, supplemented by professional guidance from other sources as available. Initial leading practices that have been collected include:

- **Overall Communications**
  Set clear transparent communications patterns that keep staff informed and socially connected. Consider having team or group “how-is-everyone-doing” calls in addition to normal business calls where people can discuss anything but the business.

- **Individual Conversations**
  Unfortunately, what can sometimes become clear during team calls is that in a group it is easy to default to a herd mentality of “we are ok.” People don’t want to share their fears in front of others. As such, bilateral calls can be key. Consider having individual calls on a regular basis with each staff member to assess how they and their families are really doing and how they are handling the situation. Include a conversation on current or potential challenges.

- **Honesty**
  Encourage open discussion, regardless of the format, of fears and anxieties to create a space for compassion and understanding. It will also break the stigma around mental health. Once we are able to name our fears, it’s easier to find solutions. Ask employees what they are worried about, what scares them and share back our own fears. It is not critical to have immediate responses to these fears, but rather to acknowledge and show empathy and understanding.
• **Terminology**
  Language matters when it comes to mental health. Change phrases like “this is crazy” to “this is overwhelming, frustrating, etc.”, and add more to positive phrases to emphasize the importance of the employee’s wellbeing and life outside of work. For example, “keep up the good work” can be changed to “you are doing a terrific job and it’s much appreciated, but your health is more important.”

• **Exhaustion**
  Address the potential for burnout. Responding to the ever-changing context we’re currently experiencing, could potentially burn out our highest achievers. It is real, but surrounded by lots of stigma. It is also not a weakness. The subject should be addressed in order to create a plan that anticipates challenges before people get to their boiling point. Tell employees, they should ensure they’re not working too much overtime, or to take time off regularly, etc. Continuously communicate the message that life-work balance is important, noting that life goes before work.

• **Child Care**
  Be aware that because of the needs of children in the home, whether school work related or driven out of isolation from their friends and classmates or boredom, parents will have to carve out a certain amount of each day to give attention to their child/children.

• **Care Givers**
  Keep in mind care givers may also have ongoing responsibilities to others suffering from mental illness, the elderly, sick family members, or family members living abroad who are experiencing very different circumstances.

• **Set Clear, Simple Work Priorities**
  Work as a team to define what is a priority/most important from a work perspective. Cut out the nice-to-do’s and hone in on the need-to-do’s. This will help with the fears around delivery on work plans. The reality is we may not be able to do all that we wanted to do in 2020 for a number of reasons It is important to continue putting our response to this situation in the context of keeping health, safety and wellness first and then our work, second.

• **Balance the Day and the Work**
  Be clear that the normal hours worked in a day may not be continuous as people may have to take frequent breaks to address priorities in the home. Work with employees on flexible work arrangements and schedules when possible to help relieve stress imposed by working from home amongst other responsibilities and distractions.
Life/Work Balance

It may be all too easy to have the lines between when to work versus when to relax, blur. Encourage a regimen that is similar to the normal office routine and emphasize the need to step away and relax after hours and on weekends/holidays.

- Physical Exercise
  Physical activity is important for mental health. Encourage employees to allot time in the day to be active either before or after work periods, or by taking breaks throughout the day for physical activity. Physical activity supports: sharper memory and thinking, self-esteem, improved sleep, increased energy levels, and stronger resilience. A “step challenge” is a simple way of encouraging activity among employees.
